

SYSTEM AND METHOD OF PRINTING LABELS

ABSTRACT OF THE DISCLOSURE

Printing one or more value indicia onto a printable medium using a remote device coupled to a computer server via a communications network includes accessing the computer server with the remote device. A user is prompted to select a serial number associated with the printable medium, and the serial number is transmitted to the computer server using the remote device. A print control program is received from the computer server. Information for printing one or more value indicia are transmitted from the computer server to the remote device. The print control program executes on the remote device to print the one or more value indicia to the printable medium using a printer coupled with the remote device.
